A vacuum leak in a Nissan Maxima is caused by air infiltrating the engine. Instead of this air passing through the throttle body where the amount of air is regulated by the car's computer, the air passes through a leaking gasket or other leak in the engine. Vacuum leaks in a Maxima can manifest themselves in a variety of ways.

Nissan Maxima Vacuum Leak Symptoms | It Still Runs

1999 Nissan Maxima 140,000 mi, buckeye03 check engine light stayed on.Put some fuel additive in and the light went out temporarily.Came back on,turned out to be clogged EGR valve

Check engine light due to clogged EGR valve on Nissan Maxima

I traced this problem to the ECU temp. sender (Nissan part Number 2263044820) top righthand side of engine just behind where the top hose meets the cylinderhead. there are two temp senders, the nearest to the front of the car has 1 lead (this is for the dash guage) the one behind it has a grey plastic connector with 2 leads. this is the one you need. I took it out cleaned it with some fine ...

SOLVED: 1996 nissan sentra transmission vacuum hoses - Fixya

Thats the problem. The hunt is for negative air pressure leak, not boost leak. Soapy water would be good for a boost leak but not a vacuum leak. Yes, bringing the engine off idle will mask a vacuum leak. But it not a good idea. Your using air that has not been metered by the MAF, and by doing this you are most likely running lean.

There was a TSB for this code on this model year Maxima. The bulletin stated that the code "MAY" also include loss of power, stalling and surging (but not necessarily). The repair included a new style mass air flow sensor, installing a genuine Nissan air filter and a new ECM software program designed for the new style MAS.
