covers current refinery processes and process-types that are likely to come on-stream during the next three to five decades. The book includes (1) comparisons of conventional feedstocks with heavy oil, tar sand bitumen, and bio-feedstocks; (2) properties and refinability of the

various feedstocks; (3) thermal processes versus hydroprocesses; and (4) the influence of refining on the environment.

This handbook describes and discusses the features that make up the petroleum refining industry. It begins with a description of the crude
