This book highlights the latest advances in the science and practice of using ecosystem services to inform decisions for economic development in the context of the developing countries. The development of the ecosystem services paradigm has enhanced our understanding of natural capital as an indispensable form of capital asset along with produced and human capital. This book addresses what could be the possible pathways to mainstream natural capital assets into development policies and what is currently known about the economic values of ecosystem services. A series of innovative tools to help policy makers and planners account for natural capital and ecosystem services in sectoral and macroeconomic policies have been explored and their application at the national and regional scale has been demonstrated. Several detailed case studies are presented in which the understanding of ecosystem services values has successfully informed decisions, including examples from Chile, South Africa, Tanzania, Trinidad and Tobago, Vietnam and the Aral Sea in Central Asia. These provide the critically important insights, lessons learned and means and mechanisms for policy makers to incentivize protection and discourage degradation of ecosystems and the services they provide. Mainstreaming Natural Capital and

Marine tourism has become one of the fastest growing areas within the tourism industry. With the increased use of marine environments comes the need for informed planning and sustainable management as well as for the education and training of planners, managers and operators. Combining the disciplines of marine scientists and tourism researchers, this encyclopedia will bring together the terms, concepts and theories related to recreational and tourism activities in marine settings. Entries range from short definitions to medium and long articles.

This book discusses topics in mission-oriented sensor networks and systems research and practice, enabling readers to understand the major technical and application challenges of these networks, with respect to their architectures, protocols, algorithms, and application design. It also presents novel theoretical and practical ideas, which have led to the development of solid foundations for the design, analysis, and implementation of energy-efficient, reliable, and secure mission-oriented sensor network applications. Covering various topics, including sensor node architecture, sensor deployment, mobile coverage, mission assignment, detection, localization, tracking, data dissemination, data fusion, topology control, geometric routing, location privacy, secure communication, and cryptograph, it is a valuable resource for computer scientists, researchers, and practitioners in academia and industry.

There is overwhelming evidence that marine resources are being overexploited throughout the world. In an effort to conserve the natural resources of the world's oceans, new methods, technologies, and practices in fishery and marine resource management must be implemented. Progressive Engineering Practices in Marine Resource Management combines scientific, ecological, and engineering approaches involved in the sustainable management of natural resources. Featuring coverage on key topics relating to environmental management, maritime spatial planning, sustainable fisheries, and waste water treatment, this publication is a critical reference source for fishery associations, scientists, environmental management authorities, and water management directorates interested in emerging technologies and innovative resource management techniques.

Encyclopedia of the World's Biomes is a unique, five volume reference that provides a global synthesis of biomes, including the latest science. All of the book's chapters follow a common thematic order that spans biodiversity importance, principal anthropogenic stressors and trends, changing climatic conditions, and conservation strategies for maintaining biomes in an increasingly human-dominated world. This work is a one-stop shop that gives users access to up-to-date, informative articles that go deeper in content than any currently available publication. Offers students and
