This book is a sound and comprehensive introduction to advertising planning and branding. Intended for students of and beginners in advertising and marketing, it discusses key issues and market realities, many of which are ignored and neglected in developing markets. The structure of this book follows a stepwise process, which starts from the beginning of the advertising planning process to the end product, which is the creative brief. Each chapter discusses a conceptual principle, which is illustrated by relevant examples. Some key issues discussed in this book are: - planning for communication in a context; - Segmentation: studying and understanding the dimensions, demographics, and psychographics of the target group; - Differentiators and Motivators: discovering what can change the consumers' mind; " managing a brand over time, looking at the entire life-cycle of a brand. Each chapter ends with an 'Action Point', which helps the reader to apply the principles discussed through an exercise.

Mechanical engineering, as its name suggests, deals with the mechanics of operation of mechanical systems. This is the branch of engineering which includes design, manufacturing, analysis and maintenance of mechanical systems. It combines engineering physics and mathematics principles with material science to design, analyse, manufacture and maintain mechanical systems. This book covers the field requires an understanding of core areas including thermodynamics, material science, manufacturing, energy conversion systems, power transmission systems and mechanisms. This book includes basic knowledge of various mechanical systems used in day to day life. My hope is that this book, through its careful explanations of concepts, practical examples and figures bridges the gap between knowledge and proper application of that knowledge.

A must-have book for anyone designing manual gearboxes, based on 40 years of industrial experience.
