Chapter 19: Viruses Overview Experimental work with viruses has provided important evidence that genes are made of nucleic acids. Viruses were also important in working out the molecular mechanisms of DNA replication, transcription, and translation. Viruses have been important in the development of techniques of manipulating and transferring genes.

## **Chapter 19: Viruses**

Viruses are the smallest and simplest life form known. They are 10 to 100 times smaller than bacteria.; The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces.

Figure 3.1. The relationship between genome size and the rate of spontaneous mutation in DNA viruses. Dots correspond to bacteriophages  $\phi$ X174, m13,  $\lambda$ , and T4, duck hepatitis B virus (DHBV), and herpes simplex virus (HSV). DHBV is a pararetrovirus,  $\phi$ X174 and m13 are single-stranded DNA viruses, and  $\lambda$  T4 and HSV are double-stranded DNA viruses.
