TO_DATE - Informatica

Informatica Transformations are repository Objects that are used to perform aggregations, sorting, merging, modifying, distributing, etc., while passing data through them. The Power Center Designer provides a set of transformations in Informatica that perform specific functions.

Informatica Transformations - Tutorial Gateway

Abstract You can use functions in the Expression Editor in Informatica Analyst (the Analyst tool) to add expression functions to rules and filters in a mapping specification. This article describes the common functions that data integration analysts use in the Expression Editor.

Common Expression Editor Functions in Informatica Analyst

Informatica Transformations are PowerCenter repository objects that generates, modifies and passes data. Transformation allows you to define business rules for processing data. Informatica PowerCenter Designer provides a set of transformations to perform specific functions.

Informatica Transformations with Examples

Informatica MDM Multi-Domain Edition (MDE) provides reasonable number of cleanse functions out-of-the-box. However, there are requirements when the OOTB cleanse functions are not enough and there is a need for comprehensive functions to achieve data cleansing and standardization, for e.g. address validation, sequence generation. Informatica Data Quality (IDQ) provides an extensive array of cleansing and standardization options.
