Updated July 03, 2019. In many areas of language study, such as structural linguistics, markedness is a state in which one linguistic element is more distinctively identified (or marked) than another (unmarked) element. As Geoffrey Leech observed, "Where there is a contrast between two or more members of a category such as a number, case, or tense, one of them is called 'marked' if it contains some extra affix, as opposed to the 'unmarked' member which does not."

Markedness: Marked and Unmarked Forms in Language

Markedness is a central concept in the study of linguistics in the 20th and 21st centuries, and it can be traced back to the early developments of structuralist phonological theory. However, during the course of the 20th century it has acquired so many different meanings and uses that its current usage is still much debated and not clearly defined.

Markedness - Linguistics - Oxford Bibliographies

In linguistics and social sciences, markedness is the state of standing out as unusual or divergent in comparison to a more common or regular form. In a marked-unmarked relation, one term of an opposition is the broader, dominant one. The dominant default or minimum-effort form is known as unmarked; the other, secondary one is marked. In other words, markedness involves the characterization of a "normal" linguistic unit against one or more of its possible "irregular" forms. In linguistics ...

Markedness - Wikipedia

Markedness Theory proposes that in the languages of the world certain linguistic elements are more basic, natural, and frequent (unmarked) than others which are referred to as marked. The concept of Markedness is first proposed by the Prague School scholars Nikolai Sergeevich Trubetzkoy and Roman Jakobson.

In healthy language, changes reflect a mixture of reducing and increasing morphological markedness (where markedness is related to complexity and unnaturalness). Obsolescing languages, on the other hand, are

known to simplify fairly exclusively (Campbell & Mutzel 1989, Dorian 1978, Austin 1986).

The evidence indicates that language contact may lead to various changes in phoneme inventory, phonotactics, and rule inventory, or to no change at all. Analyses of the data argue against the view that language contact invariably involves simplification but suggest that markedness is an important notion in accounting for certain features of interlanguages.

Markedness is a very important concept in linguistic theory and in cross-linguistic study. Its origins are in the theory of language developed in the Prague School and continued principally by Roman Jakobson. Building on ideas of Nikolai Trubetzkoy, Jakobson used the concept of markedness as the theoretical foundation both
