Models in hydraulic engineering : physical principles and ...

The fourth volume of Developments in Hydraulic Engineering follows the pattern set by the previous three volumes, in that individual chapters give an authoritative and comprehensive review of subject areas within hydraulic engineering. Each chapter is written by an author or authors active in the subject and who have contributed to its development.

Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...

computational models in hydraulic engineering. The book's key topics are explored in two parts - dam engineering and other hydraulic structures - and the text concludes with a chapter on models in hydraulic engineering. Worked numerical examples supplement the main text and extensive lists of references conclude each chapter.

6.23.2 The Hydraulic Gradient. The method to determine the hydraulic gradient is based on the assumption that the total hydraulic gradient in 2 phase flow can be split into two parts, the vehicle hydraulic gradient (homogeneously distributed particles) and the excess hydraulic gradient due to bed formation (heterogeneously distributed particles).
