Molecules Of Emotion The Science

The first component of the molecules of emotion is a molecule found on the surface of cells in body and brain called the opiate receptor. It was my discovery of the opiate receptor that launched my career as a bench scientist in the early 1970s, when I found a way to measure it and thereby prove its existence.

If receptors are the first components of the molecules of emotion, then ligands are the second. The word ligand comes from the Latin ligare, "that which binds," sharing its origin with the word religion. Ligand is the term used for any natural or manmade substance that binds selectively to its own specific receptor on the surface of a cell. The ligand bumps onto the receptor and slips off, bumps back on, slips back off again.
