## **201 Years Ago, This Volcano Caused a Climate Catastrophe**

The aberrations are now generally thought to have occurred because of the April 5–15, 1815, Mount Tambora volcanic eruption on the island of Sumbawa, Indonesia. The eruption had a volcanic explosivity index (VEI) ranking of 7, a colossal event that ejected at least 100 km<sup>3</sup> (24 cu mi) of material. It was the world's largest since the eruption of Paektu Mountain in 946 AD.

Tambora's 1815 eruption was the largest in recorded human history and the largest of the Holocene (10,000 years ago to present). The magma chamber under Tambora had been drained by pre-1815 eruptions and underwent several centuries of dormancy as it refilled. Volcanic activity reached a peak that year, culminating in the eruption.
