The required text is The Theory of Point Estimation, second edition, 1998 by E.L. Lehmann and George Casella, ISBN # 0-387-98502-6. I will refer to this text as TPE2. The book has a few errata, mostly typos. (There were a few additional ones in the first printing, but I assume that by now most people will have the second printing or later.)

Math 5062: Theory of Statistics II

Estimation theory is a branch of statistics that deals with estimating the values of parameters based on measured empirical data that has a random component. The parameters describe an underlying physical setting in such a way that their value affects the distribution of the measured data.

parameters and the testing of statistical hypotheses. All three contemporary paradigms of inference (Likelihood, Classical, Bayesian) are presented and compared; traditional properties of estimators (bias, consistency, efficiency, sufficiency, etc.) and tests (size, power, probability) are considered in detail.
