The Toyota E engine family is a straight-four piston engine series, and uses timing belts rather than chains. The E engines were the first multi-valve engines from Toyota designed with economy, practicality and everyday use in mind (rather than performance). Like many other Toyota engines from the era, the E engine series features a cast iron block, along with an aluminium cylinder head.

Toyota E engine - Wikipedia

The Corolla E90, introduced in 1987 for the 1988 model year, was the sixth generation of cars sold by Toyota under the Corolla nameplate. It was the last generation of Corolla to be classified as a subcompact car and the first to be exclusively front-wheel drive or all-wheel drive; the performance option of rear-wheel drive was dropped.. For general export, the trim levels were Base, XL, GL ...

Toyota Corolla (E90) - Wikipedia

The Corolla E100 was the seventh generation of cars sold by Toyota under the Corolla nameplate. This generation of Corolla was larger, heavier, and visually more aerodynamic than the model it replaced. With its 2465 mm (97 in) wheelbase, the Corolla had moved into the compact size class once occupied by the Corona and Camry.The Corolla again had an equivalent model Sprinter, with the Sprinter ...
