Identities 1 page 4 6.

$$\cos^2 x = \csc x \cos x$$

$\tan x + \cot x$ Solution: We

will start with the right-

hand side. We will re-

write everything in

terms of $\sin x$ and $\cos x$

and simplify. We will

again run into the

Pythagorean identity,

$$\sin^2 x + \cos^2 x = 1. \text{ RHS}$$

$$= \csc x \cos x \tan x + \cot x$$

$$= \frac{1}{\sin x} \cos x \frac{\sin x}{\cos x} + \frac{\cos x}{\sin x}$$

$$+ \frac{\cos x \sin x}{\cos x \sin x} = 1 \sin x$$

Note that the three identities above all involve squaring and the number 1. You can see the Pythagorean-Theorem relationship clearly if you consider the unit circle, where the angle is t , the "opposite" side is $\sin(t) = y$, the "adjacent" side is $\cos(t) = x$, and the hypotenuse is 1..

identity is a mathematical statement that equates one quantity with another. Trigonometric identities allow us to simplify a given expression so that it contains sine and cosine ratios only. This enables us to solve equations and also to prove other identities.

in mathematics that involve trigonometric functions such as $\sin(x)$, $\cos(x)$ and $\tan(x)$. Identities, as opposed to equations, are statements where the left hand side is equivalent to the right hand side. A symbol, which means 'equivalent', is used instead of the usual 'equals' sign.
