The course uses COMET's Introduction to Tropical Meteorology, 2nd Edition online textbook which provides an introduction to the atmospheric processes in the tropics and recent developments in the field of tropical meteorology. Optional, special topics lessons are included and will be added to as new lessons are published.

MetEd » Course Description: Introduction to Tropical ...

Climatology or climate science is the scientific study of climate, scientifically defined as weather conditions averaged over a period of time. This modern field of study is regarded as a branch of the atmospheric sciences and a subfield of physical geography, which is one of the Earth sciences. Climatology now includes aspects of oceanography and biogeochemistry. The main methods employed by climatologists are the analysis of observations and modelling the physical laws that determine the clima

Climatology - Wikipedia

It includes a discussion of climatic change and the importance of the tropics in climatic models, an analysis of the influence of elevation and ocean currents on diurnal and annual ranges of temperature, with new maps of Africa and South America. It includes the Walker circulation and ENSO and their worldwide climate
