Tropical Deforestation A Socio Economic

Tropical Deforestation - A Socio-Economic Approach offers a new perspective on the economic imperatives which encourage indigenous populations to encroach upon their own forests, and shows how action against deforestation must form part of a wider movement to improve both the living conditions of the local inhabitants and the durability of their national economies. Part 1 offers an overview of the processes surrounding deforestation, and an assessment of the current situation.

Deforestation adds 15% of the CO2 in the atmosphere, more than the carbon from all cars and trucks. Between 2000 and 2009, 32 million acres of tropical rainforest were cut down. At that rate, deforestation will add 200 billion tons of carbon into the atmosphere in coming decades.

Deforestation: Definition, Facts, Causes, Effects, Solutions

This paper provides a survey of 'first wave' economic studies of tropical deforestation and land use. These studies of tropical forest land conversion are generally at the cross-country level. We also conduct a synthesis cross-country analysis of tropical agricultural land expansion. The results show that agricultural development is the main factor determining land expansion, but institutional factors have an important influence.
