and software have seen incredible success over the past decade. Subversion has enjoyed and continues to enjoy widespread adoption in both the open source arena and the corporate world.

Apache Subversion

Apache Subversion is a software versioning and revision control system distributed as open source under the Apache License. Software developers use Subversion to maintain current and historical versions of files such as source code, web pages, and documentation. Its goal is to be a mostly compatible successor to the widely used Concurrent Versions System. The open source community has used Subversion widely: for example, in projects such as Apache Software Foundation, Free Pascal, FreeBSD, Sourc

changes made to files and folders (directories), facilitating data recovery and providing a history of the changes that have been made over time. As a supplement to the basic IT services that ITS provides, you have the opportunity to get access to a Subversion (SVN) server.

Subversion - en.its.aau.dk

Subversion directories are always paired with an external repository, so cannot be configured for version control without also configuring the external connection. In addition, we recommend that Git repositories always be configured with a remote repository in order to protect your data and maintain a separate backup.
